Apple Key System - Vendor: Silenius Corporation - Model:.Defensin-2 is a major defensive peptide of the gibel carp, Carassius auratus gibelio, against the infestation of two species of cestode parasites of fish, Moniezia expansa and Lecithocladium musculus. Defensins are well-conserved antimicrobial peptides in many species of vertebrates. Here, we report the identification and the expression analysis of defensin-2 gene in the gibel carp, Carassius auratus gibelio. Six full-length defensin-2 cDNA sequences were obtained from 12 cDNA libraries constructed from the liver, kidney, brain, spleen, skin, gill, muscle, gonad, olfactory organ, intestine, heart and eye tissues. The deduced amino acid sequences of defensin-2 contain a signal peptide of 32 amino acids, a propeptide of 15 amino acids, two alpha-helices, one beta-sheet and three disulfide bridges. Phylogenetic analysis showed that the defensin-2 of gibel carp was closely related to those of

Microalgae is an emerging biomass with great potential for producing biofuels. While there is a well-established protocol for the measurement of microalgae biomass using flow cytometry, there is no standard technique for microalgae characterization using a refractometer. The primary goal of this research was to determine the best method for refractometer measurements of
